

ABSTRACT OF THE DISCLOSURE

An apparatus and method for providing a portable variably positionable seating device is provided. The apparatus and method for providing a portable variably positionable seating device, according to the present invention, includes a plurality of tines. In one embodiment, at least two of
5 tines include a boom that swivels on one end of the tines. Also included are one or more removable panels that engage with the tines and will support a person. A support assembly is also provided, and is pivotally connectable to the tines. The support assembly includes at least a first tube. A plurality of arms, pivotally connected to the tines and to the support assembly, are included. Also included is a carriage device. The carriage device is slidably and rotationally positioned on the first
10 tube of the support assembly. A plurality of legs, pivotally attached to the carriage device, are included.
